Filipino Craftsmanship.

In a series of articles on "America in the Philippines," printed in the London Times, the writer pays a deserved compliment to the applicate of the natives for fine workmanship in many crafts. The Filipino, says toe Times writer, "is commonly a elever draughtsman and mechanic, and makes an admirable chanfleur or driver of an electric tram, showing a steadiness of of the civil government has been, and is to employ mative assistants as large-ly as possible in all departments, and whereas six years ago there were more American employes in the government service than Filipinos there are now nearly 2,000 more Filipinos than Amerod as "one of the few who raised his voice before election.

Warrant has been issued for the arrest end of friffs and Hyrne, charging the convention the police authorities were scored in the report from Willard union, presented by Mrs. Barber. Mhe avowed that Italians had nade a business of selling beer on the outskirts of Westerly, and near Niantie, which fact was well known, but the moles and Mrs. Barber were color printing and the work is of a very high standard. In the scientific were like the moles and the work is of a very high standard. In the scientific were like the moles and Mrs. Barber were color printing; and the work is of a very high standard. In the scientific were like the moles and Mrs. Barber were color printing; and the work is of a very high standard. In the scientific were like the moles are now to the moles are processed to be a like the moles are now to the moles are processed to be a like the moles are now to the moles and highest the moles are now to the moles are now to the moles and highest the moles are now to the moles are now to the moles and highest the moles are now to the moles are now to the moles and highest the moles are now to the moles are now to the moles and highest the moles are now to th case processes of color photography and color printing; and the work is of a laboratory they are entrusted with the details of experiments requiring accuracy and technical skill of a high order, and they make scientific draw-ings, as colored plates of fishes, in-sects and so forth, of undentable ex-cellence." With reference to the work has lately sent to this office a copy of the "deek book" in use in that estab-lishment. Ten years ago the work of producing such a book would neces-sarily have been done in every detail Americans, but the copy at hand which bears a date of the present year, is the result of Filipino workmanship almost exclusively. All the mechanical work was done by natives and they now constitute 91 per cent. of the total force employed in the nursus. As the pages of the book are exemined one is filled with admiration and one leaves it filled with admiration and one leaves it with the feeling that superior work could not be done in any printing extabilishment in Europe or America. There is still American supervision of the Manilla establishment, but even that could probably be dispensed with without injury to the fineness of the mechanical processes or the artistic excellence of the finished product. The book, it may be added, is a complete compendium of information and directions concerning the varied and com-plex work of a high grade printing, engraving and binding establishment and is worthy of the attention of pracnormand restact for the capacity of the Filipinos and an increased conf-dence in their ability to take full con-trol when the time comes, of their

What About Brain Food?

This Question Came Up in the Recent Trial for Libel.

A "Weekly" printed some criticisms of the claims made for our foods. It evidently did not fancy our reply printed in various newspapers, and brought suit for libel. At the trial some interesting facts came out.

Some of the chemical and medical experts differed widely.

The following facts, however, were quite clearly established:

Analysis of brain by an unquestionable authority, Geoghegan, shows of Mineral Salts, Phosphoric Acid and Potash combined (Phosphate of Potash), 2.91 per cent of the total, 5.33 of all Mineral Salts.

This is over one-half.

Beaunis, another authority, shows "Phosphoric Acid combined" and Potash 73.44 per cent from a total of 101.07.

Considerable more than one-half of Phosphate of Potash.

Analysis of Grape-Nuts about Population and Phosphorus, (which join and make Phosphate of Potash), is considerable more than one-half of all the minural salts in the food.

Dr. Geo. W. Carey, an authority on the constituent elements of the body, says: "The gray matter of the brain is controlled entirely by the inorganic cell-salt, Potassium Phosphate (Phosphate of Potash.) This salt unites with albumen and by the addition of oxygen creates nerve fluid or the gray matter of the brain. Of course, there is a trace of other salts and other organic matter in nerve fluid, but Potassium Phosphate is the chief factor, and has the power within itself to attract, by its own law of affinity, all things needed to manufacture the clixir of life."

Further on he says: "The beginning and end of the matter is to supply the lacking principle, and in molecular form, exactly as nature furnishes it in vegetables, fruits and grain. To supply deficiencies-this is the only law of cure."

The natural conclusion is that if Phosphate of Potash is the needed mineral element in brain and you use food which does not contain it, you have brain fag because its daily loss is not supplied.

On the contrary, if you eat food known to be rich in this element, you place before the life forces that which nature demands for brain-building.

In the trial a sneer was uttered because Mr. Post announced that he had made years of research in this country and some clinics of Europe, regarding the effect of the mind on digestion of food.

But we must be patient with those who sneer at facts they know nothing about.

Mind does not work well on a brain that is broken down by lack of nourishment.

A peaceful and evenly poised mind is necessary to good digestion.

Worry, anxiety, fear, hate, &c., &c., directly interfere with or stops the flow of Ptyalin, the digestive juice of the mouth, and also interferes with the flow of the digestive juices of stomach and pancreas.

Therefore, the mental state of the individual has much to do (more than suspected) with digestion

This trial has demonstrated:

That Brain is made of Phosphate of Potash as the principal Mineral Salt, added to albumen and water.

The Grape-Nuts contains that element as more than onehalf of all its mineral salts.

A healthy brain is important, if one would "do things" in

A man who sneers at "Mind" sneers at the best and least understood part of himself. That part which some folks believe links us to the Infinite.

Mind asks for a healthy brain upon which to act, and Nature has defined a way to make a healthy brain and renew it day by day as it is used up from work of the previous day.

Nature's way to rebuild is by the use of food which supplies the things required.
